Estrella Homes Sta Rosa 2 Marilao Bulacan City,
Philippines

SUMMARY

A Senior Application Developer with 10 years of experience in **database development, optimization, and cloud solutions**. Expert in SQL/PLSQL tuning, ETL automation, and AWS services (Lambda, API Gateway, RDS, S3). Skilled at building scalable back-end systems, handling large data volumes, and streamlining workflows with automation. Strong collaborator across full SDLC with proven results in improving performance and reducing manual work.

KEY ACHIEVEMENTS

- **Improved database performance by up to 40%** through SQL/PLSQL query optimization, reducing report generation times and enhancing system responsiveness.
- **Automated data workflows** with AWS Lambda + API Gateway, cutting JSON processing effort by **70%** and reducing turnaround time from hours to minutes.
- **Streamlined ETL and migration processes** using Unix Shell & Perl scripts, decreasing manual workload by **50%** and minimizing human error.
- Delivered **99.9% uptime** across multiple production systems through proactive monitoring, tuning, and issue resolution.
- **Enhanced reporting accuracy and efficiency** by designing and customizing Oracle reports, directly supporting client decision-making.

EDUCATION

Bachelor of Science in Computer Science (2011, 2015)

College of Computer Science & Information Science, Polytechnic University of the Philippines Sta. Mesa, Manila

Undergraduate Thesis: "Lead programmer for Automatic Subtitle Generator using Hidden Markov Model (80% accuracy). Recognized among the Top 10 Theses (2015) and presented at the 11th>NNLPRS Symposium."

TECHNICAL SKILLS

Databases & Data Management

- Oracle, MySQL, PostgreSQL
- Database Design, Optimization, Performance Tuning
- Data Modelling, Data Lineage, Data Cataloguing
- ETL Development, High-Volume Data Processing

Programming & Scripting

- SQL, PL/SQL, Python, Unix Shell, Perl

Cloud & Automation

- Amazon Web Services (AWS): Lambda, RDS, S3, EC2, API Gateway, EventBridge, CloudWatch, Secrets Manager
- Workflow Automation, API Integration

Tools & Platforms

- Git, JIRA, Postman, WinSCP
- TOAD for Oracle, SQL Developer, MySQL Workbench, pgAdmin

Development Practices

- Agile & Scrum Methodologies
- End-to-End SDLC (Requirements → Development → UAT → Deployment → Production Support)

Operating Systems

- UNIX, Linux, Windows

EMPLOYMENT HISTORY

Accenture PH: Backend Developer (Atlan Data Lineage) | August 21, 2021 – Present

- Designed and built **MySQL backend** for Atlan Data Lineage, supporting large-scale metadata management.
- Automated ingestion of JSON files using **AWS Lambda + API Gateway**, cutting manual processing by 70%.
- Developed complex stored procedures and functions to process/export JSON for Mulesoft APIs.
- Created system flows and documentation on Confluence for team adoption.

Key Impact: Reduced processing time from hours to minutes via optimized parsing and database design.

Traxtech Techonologies: Oracle Developer and Support | June 01, 2018 – August 20, 2021

- Optimized Oracle transaction processing & reporting infrastructure, reducing query execution times by up to 40% through SQL/PLSQL tuning.
- Automated data migration and reporting workflows with Unix Shell & Perl scripts, cutting repetitive effort by 50%.
- Resolved critical production issues, providing 99.9% application uptime for client systems.
- Designed and delivered custom Oracle reports tailored to client requirements, improving decision-making efficiency.
- Documented and analysed recurring issues via Helpdesk tool, driving faster root-cause identification and reducing average resolution time.

Unison Computer Systems Inc.: Oracle Developer and Support | May 30, 2017 – May 30, 2018

- Provided end-to-end Oracle database support for OLTP and reporting systems, ensuring smooth data flow between applications.
- Enhanced system stability by proactively identifying bottlenecks and implementing fixes, reducing recurring incidents by 25%.
- Collaborated with business teams to customize reports and migration scripts, improving reporting accuracy and client satisfaction.
- Developed Shell & Perl automation scripts for migration processes, enabling faster deployments and minimizing human error.
- Delivered production support with 99.9% uptime, meeting strict client SLAs

Software Laboratories Inc.: Oracle Developer | February 06, 2017 – May 30, 2017

- Extracted and processed large datasets per business requirements.
- Automated file transfers (FTP/SFTP), improving delivery timelines
- Developed and modified several UNIX shell scripts according to the project specifications.

Haystack Business Intelligence Solutions: Oracle Developer | May 05, 2015 – February 03, 2017

- Developed advanced PL/SQL packages, triggers, and procedures for business applications.
- Optimized database performance, reducing heavy query runtimes.
- Customized Oracle EBS R12 (Financials & OPM) reports and integrations.
- Authored functional & technical documentation (MD50, MD70, User Guides).
